                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1497
                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether patient is affilicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1557

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       482

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1617
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1677
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention fracter to an isolated indeter actume injecture 1, computating a mucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer cancer in a patient; (f) assessing the prostate call carcinogent operation of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1737
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATCGAAGGATTCTGTTCAAATATTAGTAAAATTGAAAATAAACTTGTGCTTATATTTTG 1797
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention relates to an isolated nucleic acid molecule (I) comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                182

(I) or (II) is useful for identifying binding patrers. (I) or (II) is useful for identifying binding patrers. (I) or (II) is useful for identifying binding cate (e.g. allergic hypersensitivity, seasonal rhintis, asthma, involves determining the level of expression of (I) or (II). A computer system, comprising a database containing information identifying the systems. Comprising a database containing information identifying the systems of the or identify the relative expression level of (I). (II) is used as a marker to identify the relative expression level of (I). (II) is used as a marker to identify and as an antigen to raise polyclonal or monoclonal antibodies. (II) is useful for identifying agence that modulate expression of the protein or agents such as agents that modulate expression of the protein or agents are useful for modulating biological activity and as an antigen to raise adonists or antagonists are useful for modulating disease conditions such as allergic hypersensitivity. 120 ALGACTACATTTGAAAGAAACTTCAAGATCAAGATAAGAAAAGCCAAGAAGTTTCATCC 180 240 240 300 300 360 360 420 420 480 480 540 600 099 9 seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis GAGAAACCGAGTCACTGTGAAAAGATGGGAAATTATCTCCTGCGAAAACTCAGTTGCCTG ATGACTACATTTGAAAAACTTCAAGATCAAGATAAGAAAAGCCAAGAAGTTTCATCC GAGAAACCGAGTCACTGTGAAAAGATGGGAAATTATCTCCTGCGAAAACTCAGTTGCCTG **ACTICIDATCAGGAAAACGAGAATGGCAGTGGTTCTGAAGAAGTGTGCTACACTGTCATT** AATCACATCCCCCATCAGAGATCCTCCCTGAGCTCCAATGATGATGGCTATGAGAACATT AATCACATCCCCCATCAGAGATCCTCCCTGAGCTCCAATGATGATGGCTATGAGAACATT GACTCCCTCACAAGGAAAGTGAGACAGTTTAGAGAAAAGGTCAGAGACAGAATATGCCCTT CTTAGGACTICTGTTAGTAGGCCTTGTTCCTGCACCCATGAGCATGATTATGAAGTTGTG TTTCCACACTAAAATCCTCAAGCTGCTTTATCACCTTCCAGCAATGAAGACAATGCAGAA TAGCAGACTCTGGCGAAGTTGTTCACCCTGAGCAGGCATGAAACATTCCTTTGTGGCTA TAGCAGACTCTGGCGAAGTTGTTCTCCCTGAGCAGTGCATGAAACATTCCTTTCTGGCTA GACTCCCTCACAAGGAAAGTGAGACAGTTTAGAGAAAAGGTCAGAGACAGAATATGCCCTT TTTCCACACTAAAATCCTCAAGCTGCTTTATCACCTTCCAGCAATGAAGACAATGCAGAA AAGITTAGAAATATTATCTTATTATATATCCTTAGGCAACTCTGATATGTGGCATCTCTG AAGTTTAGAAATATTATCTTATATATATCCTTAGGCAACTCTGATATGTGGCATCTCTG TGGCTTAGGTGAAATCATAGAAATTGACACAATGACCTAAAATATTCTATGTGTTTTTGC ö DB 6; Length 3762; Sequence 3762 BP; 1220 A; 672 C; 680 G; 1190 T; 0 U; 0 Other; Indels . 0 100.0%; Score 3762; 100.0%; Pred. Plasmid DNA from the normalized library NCI CGAP Kid3 was
prepared, and se circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(cloneIDs 1322376-1323911, 1456007-1456775, and
1500552-1502855). Subtraction by Bento Soares and M.

/clone lib="Soares NFL T GBC S1"
/note="Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not 1: Site 2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI CGAP GCB1) were mixed, and ss circles were made in vitro. Pollowing HAP purification, this DNA was used tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-667239, 726408-728711, and 729096-731339. Subtraction by Bento Soares and M. Fatima Bonaldo. "

cell line RNA. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 5'-ATTCTACAGGCGCCAGGCGCGCAGGCGT (30) BN-3' (where B = A, C, or G and N = A, C, G, or T). Average insert size 1.65 kb (range 0.9-4.0 kb). 14/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo Alto, CA)."

Sequence 40, Application US/09497855A

Patent No. 6605432

GENERAL INFORMATION:

APPLICANT: Huang, Tim

TITLE OF INVENTION: HIGH-THROUGHPUT METHODS FOR DETECTING DNA METHYLATION
PILE REFERENCE: UM01523
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Greiner, T.C., McKeithan, T.W. and Chan, W.C.
Two newly characterized germinal center B-cell-associated genes,
GCET1 and GCET2, have differential expression in normal and
neoplastic B cells

as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1. constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1
RPIL-978IIS is from the library PRCI-11:4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

On Oct 24, 2002 this sequence version replaced gi:18121511.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-erranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >=
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AL606804 185467 bp DNA linear PRI 23-OCT-2002 Human DNA sequence from clone RP11-978115 on chromosome 1, complete sequence.
